

# A0 General Feedback

- Intended as help for all future assignments
- General overview
- Look to your own feedback

# Regarding Code

- Nonsensical logical flows
- Misunderstanding problem
- Both can be fixed by reading the assignment and considering your design
- Feel free to use diagrams, pseudo-code etc. sketch out your design

# Regarding Reports

- Need to state assumptions, ambiguities and errors
- Report is included for a reason, so you have a place to justify your decisions
- Nothing is more suspicious than 'It works for all inputs'

# Regarding Testing

- This is not a testing course, until it is
- You need to design tests and describe them in your report
- Your tests need to give us confidence that your solution works in all reasonable cases, and show that you have found the places that it does not work
- Select edge cases for your tests
- There is no 'golden number' for an amount of tests. When in doubt, more tests
